

KYRIAN ODIMMEGWA

Frontend Software Engineer

Imo State, Nigeria · +234 704 557 2288 · kyrianodimmegwa@gmail.com

PROFILE

Frontend Software Engineer focused on building fast, accessible, and visually polished web applications. Experienced across modern frontend architecture, enterprise applications, real-time interfaces, AI-powered products, and data-driven platforms.

Strong focus on React, TypeScript, Next.js, Angular, GraphQL, and modern frontend tooling, with an emphasis on clean architecture, reusable components, responsive interfaces, and production-quality code. I enjoy turning complex product requirements into simple, intuitive interfaces and working across the boundary between design, engineering, and product.

EXPERIENCE

ACCESS SOFTEK

Frontend Software Engineer

Aug 2022 – Present

Built and maintained production web applications using React and TypeScript, including AI-powered conversational interfaces and enterprise software.

- Developed AI-powered chat interfaces using React and Vercel AI SDK
- Built streaming conversational experiences with context-aware interactions
- Integrated third-party services and APIs into production applications
- Refactored legacy frontend code and improved application maintainability
- Implemented automated end-to-end testing with Playwright
- Worked with AWS deployment infrastructure including S3 and CloudFront
- Contributed to CI/CD workflows and frontend quality improvements
- Implemented reusable UI components and frontend architecture patterns

Technologies: React · TypeScript · Next.js · Vercel AI SDK · GraphQL · AWS · Playwright · Jest · GitHub Actions

DOMCLICK / SBER

Frontend Software Engineer

Nov 2021 – Jul 2022

Developed B2B web applications and CRM functionality for a large-scale real-estate technology platform.

- Developed a B2B partner platform using React and TypeScript
- Built CRM functionality for internal sales workflows
- Created reusable widgets for integration with external services
- Worked with GraphQL-based data flows
- Contributed to microservice-oriented frontend architecture
- Implemented responsive interfaces and reusable component systems
- Supported CI/CD workflows for QA and production environments

Technologies: React · TypeScript · GraphQL · REST APIs · Redux · CI/CD · Git

SELECTED PROJECTS

TELEGRAM FINANCE ASSISTANT *Next.js · Node.js · Prisma · PostgreSQL*

Full-stack financial tracking application integrated with Telegram.

- Built expense tracking and budgeting functionality
- Implemented financial analytics and spending insights
- Integrated Telegram bot interactions
- Designed data models for financial records
- Built responsive dashboards for visualizing spending patterns

Role: Full-Stack Developer

AI-POWERED CHAT INTERFACE React · TypeScript · Vercel AI SDK · AWS

Conversational AI interface designed around streaming responses, context memory, and multiple AI models.

- Built real-time streaming chat UI
- Implemented conversation state and context handling
- Integrated AI model APIs
- Designed reusable conversational UI components
- Added automated testing around core user flows

Role: Frontend Software Engineer

ACCESS DIGITAL® BANKING React · TypeScript · GraphQL · Apollo

White-label digital banking platform designed to support financial institutions and their customers.

- Developed reusable banking interface components
- Integrated GraphQL data sources using Apollo
- Built responsive account and transaction interfaces
- Worked on reusable frontend architecture for multiple deployments

Role: Frontend Software Engineer

GOOD'OK MUSIC SERVICE Next.js · React · SSR

Music streaming platform developed for a telecommunications environment.

- Developed subscription management interfaces
- Built content discovery experiences
- Implemented server-side rendered pages
- Created reusable UI components for the platform

Role: Frontend Software Engineer

CLIENTS WORLD MVP React · TypeScript · REST API

Customer engagement platform featuring analytics dashboards and campaign management.

- Built dashboard interfaces
- Integrated REST APIs
- Developed campaign-management workflows
- Implemented reusable components and responsive layouts

Role: Frontend Software Engineer

GLOBAL SYSTEM MONITORING Angular · RxJS · WebSockets

Real-time infrastructure monitoring application.

- Built real-time monitoring interfaces
- Integrated WebSocket data feeds
- Created live status and alert visualizations
- Implemented reactive data flows using RxJS

Role: Frontend Software Engineer

MASTERCASE CRM MODULES Angular · TypeScript · SCSS

Enterprise CRM modules covering authentication, messaging, notifications, and user management.

- Developed CRM interface modules
- Implemented role-based access functionality
- Built notification and templating interfaces
- Created reusable Angular components

Role: Frontend Software Engineer

INVESTMENT EVALUATOR Next.js · Chart.js · REST API

Interactive web application for evaluating company investment attractiveness using financial data.

- Integrated external financial data APIs
- Built interactive data visualizations
- Created evaluation interfaces and scoring workflows
- Developed responsive application architecture

Role: Frontend Software Engineer

DOMCLICK PARTNER PORTAL React · TypeScript · GraphQL

Partner-facing portal for property professionals.

- Built partner onboarding workflows
- Developed document management interfaces
- Created analytics dashboards
- Integrated GraphQL APIs

Role: Frontend Software Engineer

COMPAS 2.0 CRM React · TypeScript · GraphQL

Internal CRM platform for sales teams.

- Developed lead management interfaces
- Built pipeline tracking functionality
- Implemented reporting dashboards
- Integrated GraphQL data services

Role: Frontend Software Engineer

TECHNICAL SKILLS

FRONTEND

React · Next.js · TypeScript · JavaScript · Redux Toolkit · Angular · RxJS · HTML5 · CSS3

STYLING & UI

SCSS / Sass · PostCSS · Tailwind CSS · Responsive Design · Design Systems · Figma → Code

DATA & APIs

GraphQL · Apollo · REST APIs · WebSockets · Prisma · Node.js · PostgreSQL

TESTING & QUALITY

Jest · React Testing Library · Playwright · Cypress · Code Review · CI/CD · ESLint · Prettier

AI & PRODUCTIVITY

Vercel AI SDK · AI-assisted Development · Prompt Engineering · GitHub Copilot · ChatGPT · Cursor

TOOLS & DEVOPS

Git · GitHub · Vite · Webpack · Docker · Vercel · AWS · GitHub Actions

ENGINEERING APPROACH

- 01 — UNDERSTAND** Start with the problem rather than the implementation. Understand the users, requirements, constraints, and desired outcome before writing code.
- 02 — ARCHITECT** Plan component structure, data flow, state management, and API interactions before implementation.
- 03 — BUILD** Write maintainable TypeScript and composable components with clear boundaries and predictable behavior.
- 04 — POLISH** Pay attention to responsive behavior, loading states, accessibility, animations, edge cases, and the details that make an interface feel finished.
- 05 — TEST** Use automated testing to verify important user behavior and protect the application during refactoring.
- 06 — ITERATE** Ship, observe, improve, and continuously refine both the product and the underlying system.

PROFESSIONAL STRENGTHS

- | | |
|--------------------------------|-------------------------------------|
| • Frontend architecture | • Design-to-code implementation |
| • Component-driven development | • Performance-conscious development |
| • Responsive UI engineering | • Automated testing |
| • API integration | • Cross-functional collaboration |
| • Real-time applications | • Problem solving |
| • AI-powered interfaces | • Product thinking |
